

## Tokens Sale

Tokens Ticker: ZTPS

Total Tokens: 880 Millions ZTPS

Soft Cap : 2 Million USD

Hard Cap : 12 Million USD

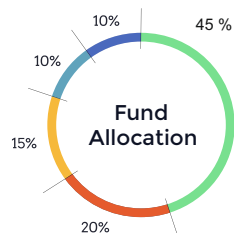

Token Sale  
(35 % of total tokens)

Tokens to sell: 308 Millions ZTPS

- 35% Tokens to be released for Token Sale (308 million)
- 25% Tokens to be released by Activity Mining (220 million)
- 20% Tokens for Company Reserve (176 million)
- 17% Tokens for Advisors, Founders & Team (149.6 million)
- 3% Tokens for ZTips Bounty Campaign (26.4 million)

## Fund Allocation

- 45% Research & Product Development
- 20% Outreach, Partnership & Integration
- 15% Market Adoption
- 10% Legal Tech Design adoption
- 10% Miscellaneous Expenses

## TEAM

Opinder Preet Singh  
CEO & Founder

Chris Bates  
Head of Security Infrastructure

Bhavik grover  
Head of Product Design

Prof Vipin Rath  
Lead Blockchain Architect

Anshul Dhir  
Head of Strategy & Finance

Austin B Hansen  
Combating Human Trafficking Expert

Lior Zaks  
Criminal Law Advisor

Kapil Gulati  
Head of Operations

Sunil Aggarwal  
Blockchain Advisor

## DECENTRALIZED PLATFORM FOR ANONYMOUS INFORMATION EXCHANGE

Ztips is a private secure global platform that facilitates anonymous information exchange between information seekers and information providers everywhere. It paves the way for a vast interconnected tip reporting and anonymous information sharing framework. Information seeking institutions and tipsters interact on a zero knowledge proof platform by exchanging tips, reporting crimes and earning rewards.

## THE PROBLEM

- Traditional tip reporting and anonymous information systems are extremely unsafe as the tipster can be easily tracked down using IP address, internet access point data, cookies, and digital footprints.
- Crime reporting is plagued by abysmally low rates of crime reporting and conviction. The net share of crime reporting to law enforcement in the USA for the year 2011 was a mere 39%. This ratio is significantly lower in developing countries.
- This is true for all other events that involve tip reporting and information sharing. For instance, media reporting, cyber crime reporting, sexual harassment, human trafficking, etc.
- Tipsters or victims have no anonymity and find themselves exposed to various dangers. Traditional Law systems are unfriendly, confined to territorial jurisdictions, involve tedious processes, colossal costs and lack a crime-prevention framework
- It is not easy for Law enforcement agencies to seek desired information either. It usually involves a significant cost of operations, time and efforts. Even the witness protection program incurs heavy costs and is a long cumbersome process for everyone
- The problem tends to arise at the initial phase itself wherein the consequences and hindrances of crime reporting for a common citizen often outweigh the potential benefits

## THE ZTIPS SOLUTION

- Ztips will bring a paradigm shift in tip reporting and act as a bridge between information providers and seekers everywhere. Information loses its value with time, people, latitude and longitude and this platform will help in dissolving this asymmetry
- Anonymity is crucial while handling a sensitive piece of information. ZTips will provide a private, secure and

global platform using Tor and Zero-knowledge-proof technology where information providers and information seekers can exchange information anonymously.

- Legal structure, institutions and corporations can procure information more easily by reaching a larger, more inclined audience and attracting them with tips.
- Information providers on ZTips can communicate any relevant information anonymously, report crimes, respond to information seekers and enjoy guaranteed rewards. Anyone can be a Superhero.
- ZTips will also allow public information sharing like Twitter while keeping the tipster's identity anonymous.
- A benchmarking system will be put in place by ZTips to rank the information seekers according to the number of Tips resolved by them using the shared tips.

## FEATURES OF ZTIPS

### • ZAPP

Ztips will be the first of its kind to deploy Zapp, Ethereum decentralized applications (dapps) that use privacy tech built on the zero knowledge proofs.

### • Fully Anonymous User Experience

**1. Guarded Identities :** Users can truly hide behind the screen Information providers have hidden identities on ZTips and remain anonymous. This is an important precursor to safeguarding users' life and assets Full anonymity is a great motivation for many information providers to come forward, report crimes and respond to information seekers

**2. Hidden/Encrypted Information:** All communication between information providers and information seekers shall be private and safe

**3. Untraceable Tokens:** Tokens are private possessions and hence kept untraceable with their knowledge being limited to the users themselves

### 4. Finest Privacy Techs Used

- **Tor & Zero Knowledge Proof:** Anonymous tips between hidden endpoints.
- **Anonymous Distributed File System:** A distributed tipping system enabling anonymous global access with high speed, high security and safer content.

### • Autonomous Guaranteed Reward Distribution System

The platform is designed to ensure that information providers receive their promised rewards for worthy tips. This is accomplished by the use of decentralized autonomous Smart Contracts technology which works as an escrow agent or a bank cell where the terms of the deal and money are stored until fulfillment.

### • Global Accessible Cloud-like Network

Based on Distributed Ledger technology, Ztips provides a platform which can be accessed from anywhere on the globe and can connect to any one too.

**1. Smoother, Faster and Easier:** In the absence of intermediaries and superfluous processes, ZTips streamlines the process of crime reporting.

**2. Anonymous Tips across Borders:** Crimes that are international in nature like terrorism can be effectively addressed on this global interconnected platform.

### • Information Integrity on the Platform

ZTips will take adequate measures to promote information credibility and integrity on the platform. For instance, to prevent misuse users will have to pay some tokens as a charge during the process of offering tips.

### • Zweet

The Ztips platform introduces anonymous information sharing platform like Twitter that will allow the user to publically share crucial information and tagging the concerned authorities, only the information provider here will be protected by anonymity. This will help the users to come forward and share critical information with the public, which otherwise would have remained hidden due to the risks involved.

### • Zmark

ZTips will further extend to benchmarking where it will rank the tip and information seekers according to the number of cases resolved by them using the tip shared with them. This will bring transparency to the system as higher is the ranking, better is problem resolving ability of the concerned party.
